EncureIT Systems Private Limited - Machine Test for PHP Developer – MTP23

Problem Statement – Traverse   Duration 2.5 hours

So here we are starting with you will be given some technical questions which needs to be coded and which you will have to answer in 2.5 hours only. Kindly find the below mentioned question.

1. https://microsoftedge.github.io/Demos/json-dummy-data/64KB.json
   - Traverse all the records in this to find all "name".
   - print all "name" array on page.

2. Create a form with two fields and post it and save these values in DB with their script execution time (time to execute the code i.e., after posting data) for ex.
   TableName – Demo Fields – FirstName, LastName, ExecutionTime.

3. Get dummy data from the table & store that data in excel file.

NOTE

   - Create one folder with your name.

   - Create a database with your name.
